2.R.R1

1/1 point (graded)

You are doing an analysis in R and need to use the 'summary()' function, but you are not exactly sure how it works. Which of the following commands should you run? (There is more than one correct answer, so any one these will earn the point).

- ○ help(summary)

- ● ?summary ✔

- ○ man(summary)

- ○ ?summary()

Explanation

Any of the above commands work except for 'man(summary)'. Make sure you always read the documentation so you know what functions do when you use them!
